

# **Nebraska Regional Interoperability Network**

## **Policies**

**Adopted by the Nebraska Regional Interoperability Network  
Board of Directors**

## NRIN Quality of Service (QOS)

Quality of Service on the Nebraska Regional Interoperable Network shall be as stated below. It is understood that as the network is utilized that bandwidth allowances to each level may be changed to accommodate increased or decreased use. It is understood the routing and network management will have highest priority by default.

Level 1 – Life Safety. This level is reserved for data to include voice, video, and or data related to 911 telephony equipment and critical emergency related radio traffic. Because of our partnership with public power districts within Nebraska, low bandwidth utility equipment switching will also be included in this level.

Level 2 – Video and VOIP. This level will include any traffic that would suffer intelligibly for voice or video conference. This could include video court, day-to-day radio over IP traffic, or videoconference.

Level 3-Data. This level will include data that is not critical and is not time sensitive. This could include database backup/update, and normal data related to computer communications. Initially this level would utilize the balance of bandwidth.

Adopted on 08/02/2016

By vote of the majority of the Nebraska Regional Interoperability Board of Directors

Chair:  Date: 08/02/2016

Co-Chair:  Date: 08/02/2016

## NRIN Use Approval

All requests for use of the Nebraska Regional Interoperability Network (NRIN) will be made in writing to the NRIN Governing Board. The NRIN Board shall act on all use requests at scheduled meetings, placed on the agenda as an action item. The NRIN Board shall vote to approve or not approve use requests under current bylaws and document the decision through meeting minutes. An NRIN Officer shall communicate the decision of the NRIN Board to the requester in a timely manner.
